

SUMMARY

Data Analyst specializing in financial data analysis. Proficient in Python, SQL, and machine learning, with a strong ability to derive actionable insights from complex datasets to drive business decisions and optimize financial outcomes. Certified in Data Science and Business Analytics.

EDUCATION

Great Lakes/McCombs school of Business

Data Science and Business Analytics (PGP)
2021 – 2022

Sahyadri College of Engineering

Bachelor of Engineering (Mechanical)
2012 – 2016

SKILLS

- Python
- General Finance
- Machine Learning
- Databricks
- SQL
- Tableau/Power BI
- Advanced Excel

CERTIFICATIONS

- Introduction to Finance (Coursera)
- IBM RAG and Agentic AI (Coursera)

EXTRACURRICULAR ACTIVITIES

- Participated in CSR initiative at CRISIL, where I volunteered to teach English to students in rural areas, helping to enhance their language skills and educational opportunities.

PROFESSIONAL EXPERIENCE

Data Specialist at CRISIL

Oct 2022- Present

- Utilize **Databricks**, **SQL**, and **Python** for data analysis, visualization, and reporting, ensuring accurate and timely delivery of insights.
- Automated Excel validations using Python scripts, significantly reducing manual labour and minimizing human error. Automated many excel based activities for US Public Finance team.
- Developed and automated custom web scraping scripts using **Python (Selenium)** to extract and organize large datasets from diverse websites.
- Built dashboards using PowerBI for internal team to provide up to date data and valuable insights using visualization.
- Worked on building and testing quantitative estimation models for the “**Corporate Wallets**” offering, enabling benchmarking and market share analysis for global investment banks.
- Working on **ad-hoc analysis** and supporting central research team on multiple research requests using Advanced excel and Power query.

Quantitative Analyst Intern (CRISIL)

- Built LSTM model on Bitcoin stock price data (Time Series) with a model accuracy of 86.53 %. Performed Data cleaning and performed EDA to identify trends, patterns and hidden insights.
- Built BERT model (NLP) on Bitcoin tweets data to analyze the sentiment of the tweets regarding Bitcoin. The model inferred that most sentiment of the tweets were positive.
- Finally we performed combined analysis of Bitcoin stock price and Bitcoin tweets to see if the Bitcoin tweets have any effect on the Bitcoin trade volume. Using Spearman correlation we had enough evidence to conclude that there is a correlation between the Bitcoin traded volume and the number of tweets.

PREVIOUS EXPERIENCE

Technical Support Analyst at XSEED

Jan 2022 – Oct 2022

Technical Support at IBM

Feb 2019 – Aug 2021
